Contex Scanners takes First Place in the Reader's Choice Top Products of 2008 Award!

by Jette Lundquist, Vice President, Marketing

Wide-Format Imaging magazine readers have voted the Contex Scanners the best large format scanners on the market – for the third year in a row! The magazine's third annual Reader's Choice Top Products Awards recognize imaging products that have generated the most industry excitement and are making a big contribution to their customers' businesses.

HQ, Allerød, Denmark – Wide-Format Imaging magazine readers have voted the Contex Scanners the best large format scanners on the market – for the third year in a row! The magazine's third annual Reader's Choice Top Products Awards recognize imaging products that have generated the most industry excitement and are making a big contribution to their customers' businesses. This year, the Contex G600 Series scanners came out on top in the 24-inch+ scanner category. And it's easy to see why.

Contex scanners are an integral part of any complete scan-to-print, scan-to-file or scan-to-net solution. Recognizing that every industry's demands are unique, and that requirements vary depending on the types of documents you work with - Contex offer a range of solutions, providing the right balance of speed, quality and simplicity needed to get any scanning job done right.

In April, 2008, the G600 Series scanners are replaced with the next generation of Contex Professional Wide Format Scanners – the Contex HD Series. The launch of the HD scanners marks the next generation in Top Products for future Contex customers. The appearance of the scanners has changed to match modern wide format equipment, but the HD scanners are more than just beautiful. These professional-grade CCD-based scanners have been improved to 600dpi optical resolution and have improved USB data transfer speeds to produce better results – faster.

"We are constantly driving our product development to deliver the best product line on the market, and we are thrilled that our customers share our view – there simply is no substitute for a genuine Contex scanner", says Niels Appel, VP, Sales and Marketing for Contex operations.

Contex HD Scanners at a Glance:

- High Scanning Resolution at 600dpi optical for outstanding image quality
- Improved USB data transfer speed to provide the fastest scanning speed available
- Advanced 48-bit CCD Technology with on-board image processing
- Monochrome scanning speed up 12 ips and color up to 3 ips
- Automatic Thickness Adjustment Control (ATAC) allows media up to 15 mm thick
